Content performance hub

Most content dashboards tell you what got traffic. This one tells you what to do next.

A Claude skill that builds a live, filterable dashboard on your own page data. It scores every page, finds the high-traffic pages that leak, credits the content that drives demo requests, and writes the recommendations for you.

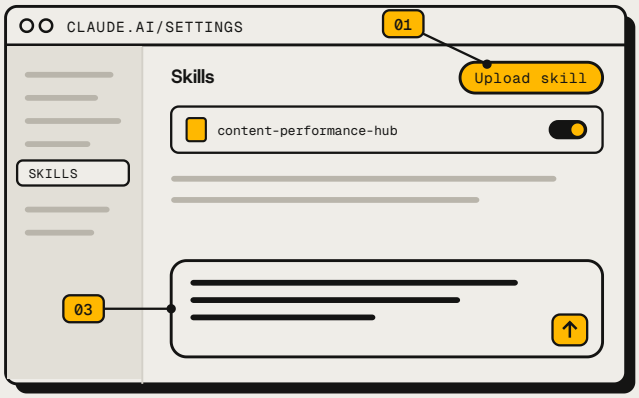

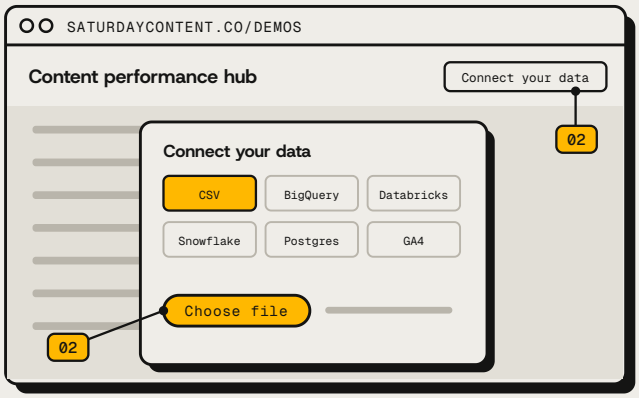

TRY THE LIVE DEMO ↗

FREE · DOWNLOAD THE SKILL AT SATURDAYCONTENT.CO

https://saturdaycontent.co/demos/content-performance-hub.html

Get started in a few clicks.

Have a Claude account

01 Download the skill and upload the .zip as a custom skill in Claude.

02 Add the connector for your data warehouse, or keep a CSV export handy.

03 Open the live demo, click “Connect your data,” copy the build prompt, and paste it into a new Claude chat.

New to Claude

01 Sign up at claude.ai and check that your plan includes skills and connectors.

02 Try the live demo first. Upload a CSV in its “Connect your data” panel to see your own numbers with no setup.

03 When you want live data, follow the steps on the left.

GOOD TO KNOW

Pro tip

Before you approve the build, check the column mapping Claude proposes. It decides whether every number in the hub is right.

Make it yours

Every template is a starting point. Rename sections, cut what you don’t need, and add what your team does differently.

WHAT'S INSIDE

01

A summary that writes itself

What's working, what's not, and what to do next, generated from your live numbers every time you change the date range or filters.

02

A verdict for every page

Fix, Double down, Sales driver, Activation surface, or Too early. Pages under your minimum sample are never ranked, so small numbers don't fool you.

03

Credit where it's earned

A page only gets credit for a demo or contact-sales request when the request comes after the reader saw that page, in the same session.

04

Journeys, not just pageviews

See the most common paths, the paths that end in a sign-up, and where readers came from and went next for any page.

05

Works with your stack

Databricks, BigQuery and the GA4 export, Snowflake, Postgres and Redshift, the GA4 API, or a plain CSV. Tabs that need missing data switch themselves off.

06

Math you can defend

Every rate is a ratio of summed counts, never an average of percentages, and the hub flags the recent days where conversions are still coming in.

Build it on your data.

01 **Try the demo**

Open the live demo to see every tab on sample data. Upload a CSV from the “Connect your data” panel to see your own numbers with no setup.

02 **Add the skill to Claude**

Download the skill and upload the .zip as a custom skill in Claude. It brings the dashboard, the instructions, and guides for each data source.

03 **Connect your data**

Add the Claude connector for your warehouse and sign in. Using a CSV? Skip this step.

04 **Write your build prompt**

In the demo’s “Connect your data” panel, pick your tools, list your pages, and name your conversion and demo pages. Copy the prompt it writes.

05 **Let Claude build it**

Paste the prompt into a new chat. Claude maps your columns, checks every page has data, and publishes your private hub. Check the column mapping before you say yes.
