Repurposing engine

One webinar, report or long post becomes a full set of assets, built only from what the source actually says.

Paste one long piece and get LinkedIn posts, a newsletter section, a blog summary, a sales email, a video script, pull quotes, a thread and an FAQ in one generation. Quotes stay word for word and attributed, and no number gets invented.

https://saturdaycontent.co/demos/repurposing-engine.html

Get started in a few clicks.

Have a Claude account

01 Add the repurposing-engine skill to Claude

02 Paste a long source into a chat and ask for the full pack

03 Ask Claude to publish your team's engine page

New to Claude

01 Create a free Claude account at claude.ai

02 Check that your plan includes skills and artifacts

03 Add the skill and paste your first source

GOOD TO KNOW

Pro tip

Keep speaker names at the start of each turn in your transcripts, so every quote in the pack is attributed to the person who said it.

Make it yours

Every template is a starting point. Rename sections, cut what you don't need, and add what your team does differently.

WHAT'S INSIDE

01

Atoms before assets

The page pulls candidate pull quotes, every sentence with a number, and every question straight from your source, before Claude writes a word.

02

Eight outputs, one click

Tick any mix of LinkedIn posts, newsletter section, blog summary, sales email, video script, pull quotes, thread and FAQ. One generation writes them all.

03

Facts stay facts

Every stat comes from the source with its meaning intact, quotes are word for word, and anything missing becomes a placeholder instead of a guess.

04

Quotes go to the right person

Speaker names and roles are read from the transcript and attached to every quote, so nothing gets credited to the wrong voice.

05

Aimed at a reader

Pick a persona and funnel stage to change which atom each asset leads with. The source decides what's true; the picks decide what leads.

06

Know what to ship first

The repurposing ladder ranks each output by effort and reach, with a one-week rollout plan for a webinar.

Build it on your own sources.

01 **Try the demo**
Open the page with the sample webinar loaded. Look at the atoms it finds, tick a few outputs, and read the example pack.

02 **Add the skill**
Add the repurposing-engine folder as a skill in Claude, then check it appears in your skills list.

03 **Run it on a real source**
Paste a transcript or long post into a chat and ask for the full pack. Check the atom map at the top against your source.

04 **Set up your page**
Ask Claude to set up your engine page. It asks for your company, house voice and personas, shows them back, and publishes a private page.

05 **Share it with your team**
Share the page. Teammates paste a source, tick outputs and generate the pack on their own Claude account.
